As to claim 1, it is not clear what is meant by "... providing a wavelength reference; comparing the wavelength reference with the stabilized photonic output signal to provide a wavelength error signal; and adjusting the modulation waveform in proportion to the wavelength error signal to correct wavelength errors in the stabilized photonic output signal". It is not clear which signal is the wavelength reference signal?? Furthermore, it is not clear what it means by comparison of the wavelength reference with the stabilized photonic output. How comparison of the wavelength reference with the photonic output signal takes place?? Furthermore, it is not clear what it means by adjusting the modulation waveform in proportion to the wavelength error signal?? How adjustment of the modulation waveform takes place??
